# SELECTION

Choose from four types of indoor units and eight outdoor units that can run up to eight indoor units each. Create the system that best matches room shapes and number of rooms.

STEP 1		SELECT INDOOR UNITS	
Select the indoor unit to be installed in each room.			
<div>Wall-mounted</div> <div></div>	<div>Floor-standing</div> <div></div>	<div>Cassette</div> <div></div>	<div>Ceiling-suspended</div> <div></div> <div>Ceiling-concealed</div> <div></div>

STEP 2		SELECT OUTDOOR UNITS	
Select the best outdoor unit based on the number of indoor units and overall system capacity required.

STEP 3		CHECK SYSTEM COMPATIBILITY	
Possible combinations depends on the outdoor unit chosen. Please check the following points.			
Check Indoor Units		Refer to the "Indoor Unit Compatibility Table" to check if the indoor units selected can be used with the outdoor unit selected. (Indoor units not listed in the table cannot be used.)	
Check Indoor Unit Capacity Combination		Refer to the "Combination Table" to check if the capacity combination of the indoor unit selected is connectable. (Combinations not listed cannot be connected.)	
If the desired combination cannot be found, please change either the indoor or outdoor unit to match one of the combinations shown in the tables.			

# MXZ SERIES

Advancements in the MXZ Series include efficiency and flexibility in system expansion capabilities. The best solution when requiring multi-system air conditioning needs.

## Handle Up to 8 Rooms with a Single Outdoor Unit

The MXZ Series offers a 13-system line-up to choose from, ranging between 3.0 and 15.5kW. All of them are compatible with specific M, S and P series indoor units. A single outdoor unit can handle a wide range of building layouts.

## "Energy Rank A" for All Models

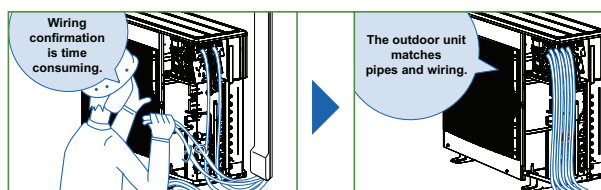

A rating of "Energy Rank A" has been achieved for all MXZ units owing to the incorporation of Mitsubishi Electric's cutting-edge inverter technologies.

## Support Functions

### Wiring/Piping Correction Function\* (4C80/5C100/6C120)

Simply press a single button to confirm if piping and wiring are properly connected. Wiring errors are corrected automatically when discovered. This eliminates the need to confirm complicated wiring connections when expanding the system. (For details, refer to the outdoor unit installation manual.)

\* Function cannot be used when the outdoor temperature is below 0°C. The correction process requires 10–20 minutes to complete and must be conducted with the unit set to the "Cooling" mode.

### Ampere Limit Adjustment (4C80/5C100/6C120/8B140)

Dipswitch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs. (For details, refer to the outdoor unit installation manual.)

\* Maximum capacity is lowered with the use of this function.

## Operation Lock

(2C/3C/4C/5C/6C/8B)

To accommodate specific use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service. (For details, refer to the outdoor unit installation manual.)
