SUPER ABSORPTION

- Fifteen sizes with nominal cooling capacities from 352 to 2461 kW.
- Designed for cooling applications where low-pressure steam is available as waste heat.
- Can tie into district steam systems.
- Allows diversification of critical cooling requirements. Critical cooling loads are met with minimal electrical power input with steam-fired chillers.
- Allows use of smaller emergency generators since the electrical load associated with an absorption chiller is minimal, compared to an electrically driven chiller.
- Ozone-friendly and CFC-free. Cooling requirements are met without chlorinebased refrigerants.
- Minimises global warming effect by greatly reducing power consumption and eliminating the generation of greenhouse gases.
- Reduced noise and vibration levels. The absorption chiller does not use a large motor-compressor, leading to quiet, trouble-free operation.
- Small footprint. The high efficiency associated with these chillers results in a reduction of the required installation space.
- Auto-diagnosis system monitors operating conditions, predicts chiller information and maintains stable operation.
- Advanced high-precision control system
- Absorption pump with inverter control (option) for energy-saving operation.
- High-performance purge system maintains unit performance and minimises maintenance requirements.
- State-of-the-art protection devices guarantee enhanced operating safety.

DISPLAY AND CONTROL BOARD

- 1 Operation indication
- 2 Stop indication
- 3 Alarm indication
- 4 Remote/local select button
- 5 Operation mode selection
- 6 Data display
- 7 Stand-by indication
- 8 Dilution indication
- 9 Safety circuit indication
- 10 Power indication
