Install Method and Update

Install SNET-i

- Put the Compact Flash Card into the upper part of a board and press the reset button. At this time, below message window appears and program installation continues for 2~3 minutes.
- 2 If recognition of the Compact Flash Card by the board is slow or the Compact Flash Card is not inserted, above screen appears. After normal Compact Flash is recognized, installation proceeds.
- **3** If fails during installation, above screen appears. User must restart installation by clicking the reset button again.

Install Method and Update (Continued)

Update SNET-i

	Alle .
SEDAC 1.0	10 Aller
Version Information 1.0 This program is damaged or old v Do you want to update?	ersion.
VES NC	Information
	The update takes a few minutes. This program will be started automatically after update is endded.
Copyright 🛞 2004 Samsung Electronics Co Ltd	
	Ŧ
	"S-Net I" is copying Wait a minute, Please
	
	Fail to execute program. You have to upgrade!!

Make program update when files are damaged or a new version is launched.

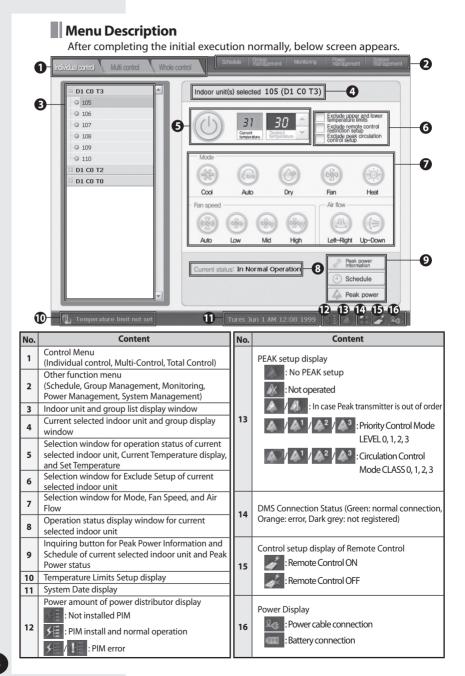

- 1 Prepare a Compact Flash Card having all 4 configuration files of SNET-i.
- **2** Put the Compact Flash Card into the upper part of a board and press the reset button.
- 3 If selecting 'YES,' upgrade proceeds. If selecting 'NO', upgrade does not proceed and the preexisted program executes or if there is no preexisted program or program is damaged, an error message appears.
- 4 Press 'OK' to confirm to proceed the upgrade.
- **5** When upgrade is completed, SNET-i is started.
- 6 If upgrade is failed, the error message on the left appears. User checks the Compact Flash Card and makes upgrade again by pressing the reset button.

SNET-i Using Method

SNET-i Initial Execution

- When restart after installing the SNET-i program to the Web-Page, the Stylus Adjustment screen appears and user set the coordinates values of the screen by a pen.
- 2 Set an IP of Web-Pad.
- 3 SNET-i software set an IP for DMS to connect. After inputting the DMS IP, execute 'Status Check'. Only in case at least one Connection Status and Authentication Status of DMS displays 'O' mark which means normal connection, next step can be preceded. If 'X' marks appear, perform 'Status Check' again.
- 4 If performing Status Check, system requests an Install Password of DMS that the connection status is 'O.' When inputting a password of relevant DMS and pressing the OK button, authentication procedure is performed. If the password is incorrect, authentication is failed.

When start is normally operated, below Individual Control screen appears first. The Individual Indoor Unit Control is a function that one group controls one indoor unit.

- 1 Select one indoor unit that controls by one group.
- 2 The selected indoor unit is displayed.

Control Individual Indoor Unit

- **3** Set On/OFF status and Set Temperature of the selected indoor unit. But in case Fan, cannot adjust temperature. If Temperature Limits Setup(Refer to page 13) is set, can adjust temperature within the range.
- 4 Can select the Upper and Lower Temperature Limits Setup, Remote Control Setup, and Peak Circulation Control Setup of the relevant indoor unit. (CHECK: Set, UNCHECK : Unset)
- 5 Select the Mode, Fan Speed, and Air Flow. (If Mode is Dry and Auto, selection of Fan Speed is restricted to Auto; if Mode is Fan, cannot select Auto among Fan Speed.)

Fan Speed Mode	Auto	Low	Mid	High
Cool	0	0	0	0

Control Indoor Unit within Group

This is a function that controls an indoor unit after viewing the current operation status of the indoor unit that belongs to a group by selecting a specific group.

- 1 If selecting one group, all indoor units which belongs that group appear.
- 2 Choose one indoor unit and select operation On/Off. (All control can be possible only in case status is 'On.')
- **3** Set temperature. (At this time, if Temperature Limits Setup is set (Refer to page 13), can be set within that limited temperature range. Also if in the Fan mode, cannot adjust temperature.)
- 4 By clicking the Mode, select a mode among items.
- **5** Select Air Flow and Fan Speed.

Fan Speed Mode	Auto	Low	Mid	High
Cool	0	0	0	0
Auto	0	х	х	х
Dry	0	х	х	х
Fan	х	0	0	0
Heat	0	0	0	0

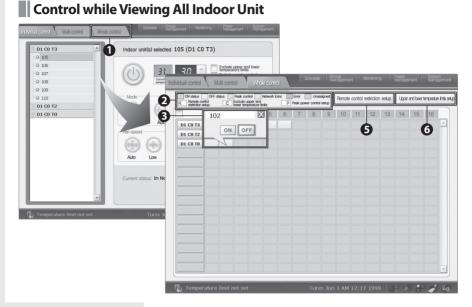

Multi-Control menu is a function that controls several indoor units simultaneously.

- 1 Select the Multi-Control on the main screen.
- **2** Select indoor units to control simultaneously. If selecting a group, all indoor units in the group are selected.
- **3** If selecting the selected indoor unit again, selection is cancelled.
- 4 Can select and cancel all indoor units.
- **5** The list and number of the selected indoor units are displayed.
- 6 Select the operation On/Off status, Set Temperature, Mode, Fan Speed, Air Flow, and so on for the selected indoor units. All controls can be possible when operation mode is 'On'. If Mode is Dry and Auto, selection of Fan Speed is restricted to Auto; if Mode is Fan, cannot select Auto among Fan Speed.

If Mode is Fan, temperature adjustment is not possible; if Temperature Limits Setup is set, can adjust temperature within the range.

Fan Speed Mode	Auto	Low	Mid	High
Cool	0	0	0	0
Auto	0	х	х	х
Dry	0	х	х	х
Fan	х	0	0	0
Heat	0	0	0	0

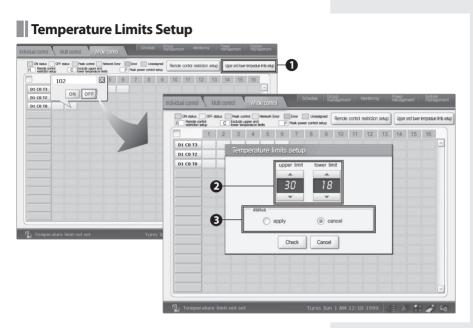

Total Control menu is a menu to view all status (Operation On/Off, Peak Control, Error Status, Assign indoor unit or not) of connected indoor units at a look. Also, users can set the Remote Control Setup and the Upper & Lower Temperature Setup for all indoor units.

Color	Mean
Blue	Power On
White	Power Off
Green	Peak Power Control Status
Red	Indoor Unit Error Occur
Grey	No assigned indoor unit
Yellow	Network Error Status
R	Remote Control Exception
С	Upper-Lower Temperature Limits Setup Exception
Р	Peak Power Setup Exception

- 1 Select Total Control on the main screen.
- **2** One unit shows an indoor unit that belongs to a group (Limited to maximum 16 units) and color and letter of each unit show the meaning shown on the left.
- 3 When selecting an indoor unit, the name of that indoor unit is displayed and user can control operation On/Off.
- **4** When selecting a group, user can see the names of all indoor units which belong to that group.
- 5 When selecting the Remote Control Setup button, user can control whether use of remote control or not for an indoor unit. (This is the same function as Temperature Limits Setup on the right page.)
- **6** When selecting the Upper-Lower Temperature Limits Setup, user can control temperature range which is selectable in an indoor unit.

This is a function to restrict temperature selection by setting the upper and lower temperature limits.

- 1 Click the Upper-Lower Temperature Limits Setup on the right upper part of Total Control screen.
- Set the Upper-Lower Temperature Limits for an individual room.
- Select whether applying the set temperature to an indoor unit or not. For the individual room which set temperature after selecting Apply, user can change it within the temperature limit range.
 If set Cancel, in case of Heat mode, user can change within the range 16~30 degree; in other cases, Cool, Auto, Dry, and Fan, user can change within the range 18~30 degree.

User can add, edit, and delete schedules for the DVM operation or can select whether applying selected schedule or not. Also, user can set Schedule Period when creating a schedule and can select and apply an indoor unit to apply, Date, and Exception Day to the Event List.

- 1 Select the Schedule on the main menu.
- **2** On the Schedule List, pre-registered schedule and operation status are displayed.
- **3** When selecting a schedule from the Schedule List, the Repeat Period, Schedule Status, and Contents for the relevant schedule are displayed.
- 4 Can see an indoor unit which the selected schedule will be applied.
- 5 Can see the Exception Day for the selected schedule.
- **6** Can create new schedules or stop the current schedule in progress and can edit, delete, apply, and cancel the selected schedule.

Group Management

Control groups and indoor units by putting them in a logical group. Perform functions, the Create New Group, Delete Group, Move Group, Rename Group, Initialize Group, Save Current Group Setting, and Open Previous Group Setting.

- 1 Select the Group Management menu on the main menu.
- **2** When selecting the Group Management, as shown in the picture 40, the Group Management main screen is displayed.
- **3** Using the 'Up' and 'Down' buttons, can move the position of a group or an indoor unit to up and down. When the selected item is only one, user can use this menu. In case of the indoor unit, can move only within the relevant group.
- **4** When selecting the 'New Group,' a new group is created. Using the soft keyboard, can edit the group name.
- 5 When selecting the 'Delete Group' after selecting a group, can delete the relevant group. At this time, if an indoor unit is included in the group to be deleted, user cannot delete it. After creating an empty group and moving the indoor unit to this group, can delete it.
- **6** When selecting the 'Rename' after selecting an indoor unit or a group, can change the name of them.

1 This is a function to mange the Peak power and power distribution or to monitor the power. Operation of Peak power management is set to operate with one mode between the Priority Control Mode and Circulation Control Mode. According to the Priority Control Level or Circulation Control Class, it consists of a setup part forming the indoor units that become a target of Peak power management. The Power Distribution performs a function to save the power distribution data that is received from the DMS (Data Management Server) to the external storage devices and files. With the power monitoring, user can know the maximum possible power and power amount.

Peak power control mode	-

Peak Power Management-Priority Control Mode

The Priority Control Mode is an operation mode of Peak power to operate an indoor unit which belongs to corresponding level when the Peak transmitter reaches power amount corresponding to each level by including each indoor unit to the Level 1, 2, 3, or Exception. (In the order Level $1 \rightarrow 2 \rightarrow 3$)

- **1** Select the Priority Control Mode.
- **2** The current priority control mode is displayed on the screen.
- **3** If the priority control mode is in progress, running level is displayed as shown in the picture.
- 4 Can see an indoor unit that is set to Level 1, 2, and 3 or Exception.
- **5** When selecting and clicking the Start, the relevant mode is progressed.
- **6** To change the Priority Control Mode, click the button.

- 7 Can set the Priority Level by the indoor unit. At this time when selecting a level of a group, the level is applied to all indoor units that belong to the relevant group simultaneously. Basically, all indoor units are classified to Exception.
- 8 If set the Level, can see the set indoor units to the relevant Level. (Exception: Not applied to Peak setup, LEVEL1: Priority level 1, LEVEL2: Priority level 2, LEVEL3: Priority level 3)
- **9** Set the attributes of the Priority Control Mode. (Heat mode: Switch to Fan mode, temperature 16, OFF setup – Cool mode: Switch to Fan mode)

Peak Power Management-Circulation Control Mode

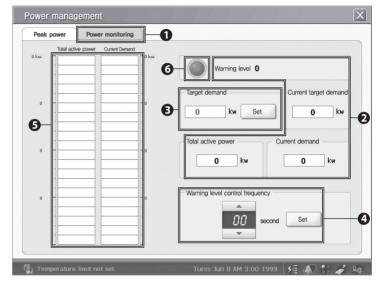

This is a menu to make circulation control the set classes according to the Peak transmitter reaching steps.

- 1 Select the Circulation Control Mode.
- 2 If the Circulation Control Mode is operated, the class in progress is displayed. (It operates at the Peak power point.)
- **3** The current set circulation control mode is displayed.
- **4** The indoor units that belong to the Exception and Classes are displayed.
- **5** Can start or stop the Circulation Control Mode with set value.
- **6** To change the set value of current circulation mode, press the Change Setup button.

🅼 Temperature limit not set 🛛 🛛 Tures Jun 8 AM 6:21 1999 🧏 🔌 🏶 🇳	l:

- 7 Set a switch mode in the Heat mode. For heating, operation mode is fixed to the Fan mode.
- 8 Set the value of Circulation Period. (Between 3 ~ 10 minutes)
- 9 Select the Use Class Number. (2~ 8 classes)

Power Amount Monitoring

This is a menu to view the maximum possible power and current power amount.

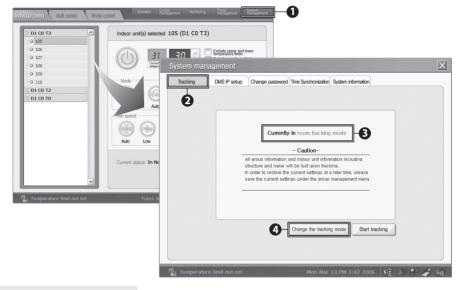

- 1 Select the Power Monitoring.
- **2** The Alarm Level (0~3), Current Target Demand, Total Active Power, Current Demand that are received from the Peak transmitter are displayed.
- **3** Set the Target Demand.

- 4 Set the Alarm Level Control Period.
- **5** Based on the Target Demand, changed amount of the Total Active Power and Current Demand is displayed.
- 6 If the Total Active Power or Current Demand is greater than the Target Demand, an image is changed to red color.

Caution

- The Priority Control Mode and the Circulation Control Mode cannot perform at the same time. If operating one mode while the other mode is in progress, previous mode is stopped.
- If an indoor unit does not become a target of the Circulation Control mode, must check the Circulation Control Exception under the Individual Control.
- To perform the Peak power and Power Monitoring, one representative DMS must connect to the Peak transmitter. If not, only power distribution menu can be usable.
- Even though network status is changed to Error status, if not requesting the information to the DMS, the network Error status is not reflected.
- Before coming out from the Power Management menu, the other setting changes besides the Power Management are not reflected.

Tracking

This is a function to receive information of all devices that form the DVM system.

- 1 Select the System Management.
- 2 Select the 'Tracking.'
- 3 The current tracking mode is displayed.
- 4 To change the current set tracking mode, select 'Change Tracking Mode.'

5	To change the tracking mode, input a password.	Enter password Pesse enter the password Ok Cancel
6	After a correct password is inputted, the Change Mode window is shown. When selecting a tracking mode and clicking the OK, the tracking mode is changed.	Switch tracking modes Group tracking mode Rom tracking mode K Cancel
7	Select the Start Tracking. At this time, tracking mode is the current tracking mode.	Change the tracking mode Start tracking
8	When a message asking whether the tracking is in progress or not is displayed, select the OK.	Start tracking Start tracking, Proceed? Current group information may be lost. Ok Cannel
9	During tracking, cannot select other menus.	Tracking Tracking, Receiving signals from the corresponding devices
10	After completing Tracking, system is configured with new information.	Tracking complete Tracking has been complete

This is a menu to connect DMS by inputting a DMS IP.

- 1 Select the 'System Management' menu.
- 2 Input a DMS IP. (Can connect the maximum 4 DMS IP)
- 3 Click the Status Check button.
- 4 If the connection status and authentication status are displayed as '0,' it connects correctly.
- **5** Green light is on at the connection status icon of the status display bar.

- Caution

- When the IP address is as below, an error message is displayed.
 - If inputting a duplicated IP
 If inputting a IP of unconnected DMS
 If the IP input range is not in 0~255
 If the IP format is not matched
- For the IP address, use IPV5.
- Can control only DMS that both the connection status and authentication status are '0.'
- When there is no after serviceman password, the authentication status displays as 'X' and must input a password.

This is a menu to change a password for applying to the system.

- 1 Select the 'System Management.'
- 2 Input the current password (password before changing).
- **3** Input a password to change and input one more time for confirmation.
- 4 Click the Apply Change button.

Caution

- Only when all three inputted passwords are correct, change is reflected.
- Even though network status is changed to Error status, if not requesting the information to the DMS, the network Error status is not reflected.
- Before coming out from the menu, the changes of the other menus are not reflected.

🕼 Temperature limit not set	Tures A	()) Temperatur	Setting Server Time to Terminal Time Setting Terminal Time to Server Time 4

This is a menu to synchronize time that applies to the difference between the SNET-i and DMS.

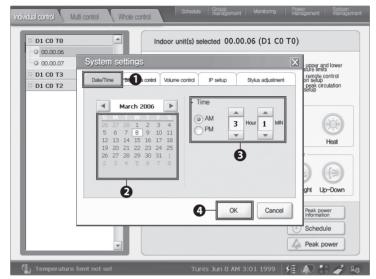

- 1 Select the 'System Management.'
- 2 Check the DMS Time (Sever Time) and SNET-i Time (Device Time).
- **3** If setting the DMS Time to SNET-i Time, click the 'Set Server Time to Device Time' button. If it processed normally, system time is changed.
- 4 If setting the SNET-i Time to DMS Time, click the 'Set Device Time to Server Time' button. At this time, the password input window is displayed. When inputting the system admin password, server time is changed.
- 5 If both DMS Time (Server Time) and SNET-i Time (Device Time) are not incorrect, can change SNet-i Time manually by clicking the 'Set Device Time' button. For more detailed information, refer to page 48 ' Adjust Date/Time!

The System Setup is performed by a external button no. 1 and operates functions of Date/Time Setup, Brightness Control, Volume Control, IP setup, and Stylus adjustment of WEB-PAD that the SNET-i software is running.

- 1 Set date and time of the system.
- **2** Set the screen brightness and battery power protection time.
- **3** Adjust the volume of the WEB-PAD.
- 4 Set an IP of the WEB-PAD.
- 5 Adjust the Stylus.

Adjust Date/Time

Set date and time of the WEB-PAD.

- 1 Select the 'Date/Time' button.
- 2 Select a date on the calendar.
- 3 Perform time setup.
- 4 Set the changed date and time by clicking the OK button.

Screen Brightness and Battery Protection Time Setup

Set the screen brightness and battery power protection time.

- 1 Select the 'Brightness Control' menu.
- 2 Adjust the screen brightness.
- 3 Set the screen switching time for protection of the battery.
- 4 Select whether applying the screen protection switching time or not.
- 5 Apply the changed contents by clicking the OK.

Adjust the Stylus of the WEB-PAD.

- 1 Select the 'Stylus Adjustment.'
- 2 Click the 'Start' button.

3 Adjust the screen by clicking the center of the cross.

Treatment before Error Confirmation

ltem	Question	Answer
When initial execution	Cannot communicate with the DMS.	Check the IP of SNET- i and DMS. If the IP is correct, check the DMS status.
	Cannot open the indoor unit information.	Perform tracking in the Configuration.
During Control	Cannot control an indoor unit.	Check the LAN LED of SNET-i. Check the communication status of DMS
	Even though not operating an indoor unit, it turns on or off automatically.	Check whether the schedule control or Peak power control is operated or not. Check whether the DMS system time is matched with current time.
	Peak control is not performed normally.	Check the communication status of DMS. In case DMS is not normal, Peak control is not performed.
Other	Screen is paused.	Click the Reset button on the left side of the SNet-i.
