

SolarWave™ SERIES

FEATURES

- High temperature butyl diaphragm
- High expansion volume factor
- Patented stainless steel connection
- Two part polyurethane, epoxy primed paint finish
- Leak free o-ring sealed air valve cap
- Comprehensive testing
- No maintenance

SolarWave™ If you are looking for the proven performance of a GWS tank, SolarWave™ expansion tanks are the quality solution for your solar system. SolarWave™ expansion tanks are designed to control the expansion and contraction of Solar Thermal Transfer Fluids in Solar Heating Systems. The SolarWave™Series is intended for use on the Solar Liquid Loop of indirect thermal transfer systems.

Solar Wave™ tanks are built to the same stringent standards as Pressure Wave™ and Challenger™ tanks. They meet the demands of solar collector systems for both thermal expansion and contraction in order to maintain safe and efficient operating pressures within the solar liquid system.

A properly sized SolarWave™ tank will eliminate the need for recharging the system after periods of no use or in cases of extreme temperature buildup. It will eliminate relief valve release of system liquid and maintain minimum operating pressures throughout the system.

SolarWave™ Series expansion tanks have a large acceptance volume making them ideal for expansion and contraction control of solar collector systems which operate under a wide range of pressure and temperature.

SolarWave™ tanks are quality tested at several stages on the production line to insure the structural integrity of every tank. SolarWave™ tanks represent the best value for the investment and are the best quality solar expansion vessels available today.

SPECIFICATIONS

SolarWave™ Series Models

Model #s		Nominal Volume		Shipping (box) Volume		Shipping (box) Weight		Dimensions					
Old Part Number	New Part Number	liter	gal	m ³	ft ³	kg	lbs	A		B		C	
								cm	inches	cm	inches	cm	inches
Inline Models													
SW2	SWB-2LX	2	0.53	0.055 (12 pcs/box)	1.94 (12 pcs/box)	13.38 (12 pcs/box)	29.5 (12 pcs/box)	20.90	8.23	12.60	4.96

Maximum system temperature: 130°C / 266°F

Maximum working pressure: 10 bar / 150 psi

System connection: SWB-8LX - SWB-80LV stainless steel 3/4" BSP inline ; SWB-100LV - SWB-150LV stainless steel 1" BSP elbow

Factory pre-charge: 1.9 bar / 28 psi

Above 150 liter use Challenger™ Series tanks

If the temperature of the solar system has the potential to rise above the evaporation point of the solar liquid a condenser chamber or coil is required between the solar collector and SolarWave™ Series expansion tank in order to control the maximum fluid temperature at the SolarWave™ tank.
