[NOTE]

*Specification may be subject to change without prior notice.

1) Specification comply with EN14511.

2) Nominal cooling capacities are based on;
Chilled water inlet / outlet temperature : 12 / 7 °C, outdoor temperature : 35 °C DB, 24 °C WB.

3) Nominal heating capacities are based on;
Heating water inlet / outlet temperature : 40 / 45 °C, outdoor temperature : 7 °C DB, 6 °C WB.

4) Sound level was acquired in an anechoic room. Thus actual noise level may be different depending on the installation conditions.

AG070	0.99	0.98	0.96	0.95	0.91	0.88	0.86	0.91	1.00

Corrected heating capacity = Heating Capacity x Capacity coefficient

On heating operation, frost can be formed on heat exchanger according to outdoor temperature.

(Frost on heat exchanger results in decreasing the performance.)

To remove frost on heat exchanger of aircooled chiller unit, defrost operation is carried out periodically.

During defrost operation, capacity of aircooled chiller unit may decrease.

The decrement is not considered to the individual capacity tables.
