## 30RW/30RWA

Nominal cooling capacity 20-315 kW

- The 30RW/30RWA Aquasnap liquid chiller range features the latest technological innovations: scroll compressors, digital auto-adaptive Pro-Dialog control and ozone-friendly refrigerant HFC-407C. Aquasnap can be supplied with hydronic evaporator and condenser modules as standard, limiting the installation to simple operations such as the entering and leaving water piping connection. An auto-adaptive control algorithm intelligently controls the condenser water pump speed and the operation of the glycol cooler fans (30RW) or of the air-cooled condenser fans (30RWA) to ensure reliable and economical operation under any climate conditions.

### "Plug and Play" installation

- Integrated hydronic modules: they minimise site installation complexity and reduce the required space for the chiller installation.

### Evaporator hydronic module

This consists of a removable screen filter, single or twin-head water pump, expansion tank, water flow switch, safety valve, pressure gauge, and purge valve. A control valve permits adjustment of the flow rate to the water system characteristics. All components are isolated to prevent condensation.

### Condenser hydronic module

This consists of a removable screen filter, single or twin-head (from size 060 upwards) variable-speed water pump, expansion tank, safety valve, pressure gauge, and purge valve. The variable-speed pump controls the chiller condensing pressure and makes the installation of a three-way mixing valve on the condenser water circuit unnecessary.

- Fan control: Pro-Dialog also controls the fans of the glycol cooler or remote air-cooled condenser. There are two methods: up to 8 stages maximum with balancing of fan operation times (30RW/RWA), or continuous speed variation (30RWA).
- Quick electrical connections: Aquasnap is equipped with a general disconnect switch and a 24 V control circuit supply transformer as standard. A single power supply entry (three-phase without neutral) supplies the chiller.

### Economical operation

- The condensing pressure is optimised by a patented auto-adaptive algorithm. At part load or moderate outside temperature an algorithm intelligently controls the condenser water pump speed and the operation of the glycol cooler (30RW) or the condenser (30RWA) fans to maintain the condensing pressure at its lowest possible value. The standard 30RW chiller can operate down to -20°C outside temperature.

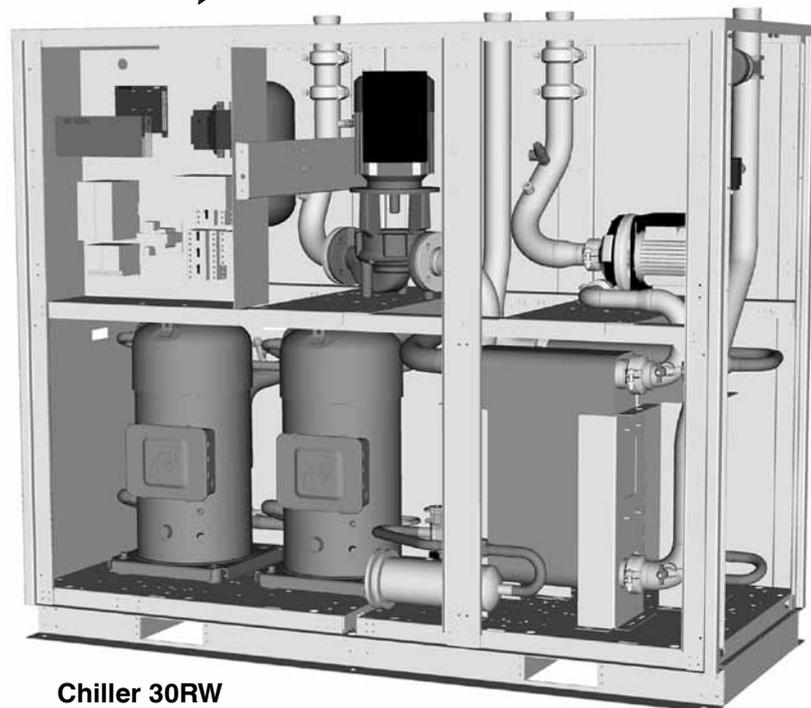

# Options

Options	No.	Description	Advantages	Use
Very low temperature glycol solution	6	Production of low-temperature chilled water down to -10°C	Covers specific applications such as ice storage and industrial processes	30RW 110-300 30RWA 020-300
Electronic starter	25	Electronic compressor starter	Reduced compressor start-up current	30RW 110-300 30RWA 020-300
High-pressure single-pump evaporator hydronic module	116B	See chapter "Hydronic module"	Easy and fast installation	30RW 110-300 30RWA 020-300
High-pressure dual-pump evaporator hydronic module	116C	See chapter "Hydronic module"	Easy and fast installation, operating safety	30RW 110-300 30RWA 020-300
Field water connections at the unit top	116E	Field water connections at the unit top	Reduced foot print	30RWA 020-045
Heat pump	150A	Hot-water control	Allows use of the unit in hot-water production mode up to 52°C	30RW 110-300 30RWA 020-300
RS485 communications and "CCN Clock Board" time schedule board	155	Additional RS485 communications board	Allows time scheduling and communication with the Aquasmart ("the hydronic solution") system via the CCN protocol	30RW 110-300 30RWA 020-300
Condenser hydronic module with variable-speed single pump	270B	See chapter "Hydronic module"	Easy and fast installation, reduced water circulating pump power consumption	30RW 110-300
Condenser hydronic module with variable-speed dual pump	270C	See chapter "Hydronic module"	Easy and fast installation, operating safety, reduced water circulating pump power consumption	30RW 110-300

The drycoolers or air-cooled condensers of the Carrier 09 series are supplied ready for installation with a control box. A simple communication bus connects the liquid chiller to the heat rejection unit. As all control components are installed and tested in the factory, installation and start-up of the chiller and its associated glycol cooler are simplified.

\* Eurovent-certified performances in accordance with standard EN14511-3:2011.

Cooling mode conditions 30RW: evaporator water entering/leaving temperature 12°C/7°C, condenser water entering/leaving temperature 30°C/35°C, evaporator fouling factor 0 m² K/W.

Cooling mode conditions 30RWA: evaporator water entering/leaving temperature 12°C/7°C, saturated bubble point condensing temperature 45°C, subcooling 5 K, evaporator fouling factor 0 m² K/W.

\*\* Gross performances, not in accordance with EN14511-3:2011. These performances do not take into account the correction for the proportional heating capacity and power input generated by the water pump to overcome the internal pressure drop in the heat exchanger.

Cooling mode conditions 30RW: evaporator water entering/leaving temperature 12°C/7°C, condenser water entering/leaving temperature 30°C/35°C, evaporator fouling factor 0 m² K/W.

Cooling mode conditions 30RWA: evaporator water entering/leaving temperature 12°C/7°C, saturated bubble point condensing temperature 45°C, subcooling 5 K, evaporator fouling factor 0 m² K/W.

\*\*\* Weight shown is a guideline only.

\*\*\*\* In accordance with ISO 9614-1 and certified by Eurovent.

† For information, calculated from the sound power level Lw(A).

†† With tubular sleeve, supplied with the unit, consisting of a Victaulic connection at one end and a plain section at the other end.

\* Power input of the compressor(s) at maximum unit operating conditions: entering/leaving evaporator water temperature = 15°C/10°C, maximum condensing temperature of 65°C, and 400 V nominal voltage.  
 \*\* Nominal unit current draw at standard conditions: evaporator entering/leaving water temperature 12°C/7°C, condenser entering/leaving water temperature 30°C/35°C. The current values are given at 400 V nominal voltage.  
 \*\*\* Nominal unit current draw at standard conditions: evaporator entering/leaving water temperature 12°C/7°C, saturated condensing temperature (dew point) 45°C, subcooling 5 K. The current values are given at 400 V nominal voltage.  
 † Maximum unit operating current at maximum unit power input and 400 V.  
 †† Maximum instantaneous starting current at 400 V nominal voltage and with compressor in across-the-line start (maximum operating current of the smallest compressor(s) + locked rotor current of the largest compressor).  
 ‡ Maximum instantaneous starting current at 400 V nominal voltage and with compressor with electronic starter (maximum operating current of the smallest compressor(s) + reduced start-up current of the largest compressor).

## Electrical data, units with hydronic modules

The pumps that are factory-installed in these units have motors with efficiency class IE2. The additional electrical data required by regulation 640/2009 is given in the installation, operation and maintenance manual.

This regulation concerns the application of directive 2005/32/EC on the eco-design requirements for electric motors.

### Electrical data notes and operating conditions:

- 30RW and 30RWA units have a single power connection point.
  - The control box includes the following standard features:
    - the starter and motor protection devices for each compressor and the pumps
    - the control devices
  - Field connections:
    - All connections to the system and the electrical installations must be in full accordance with all applicable local codes.
  - The Carrier 30RW and 30RWA units are designed and built to ensure conformance with these codes. The recommendations of European standard EN 60204-1 (machine safety - electrical machine components - part 1: general regulations - corresponds to IEC 60204-1) are specifically taken into account, when designing the electrical unit equipment.
- NOTES:**
- Generally the recommendations of IEC 60364 are accepted as compliance with the requirements of the installation directives. Conformance with EN 60204-1 is the best means of ensuring compliance with the Machines Directive § 1.5.1.
  - Annex B of EN 60204-1 describes the electrical characteristics used for the operation of the machines.
1. The operating environment for the 30RW and 30RWA chillers is specified below:
    - Environment\* - Environment as classified in IEC 60364 § 3:
      - ambient temperature range: +5°C to +40°C, class AA4
      - humidity range (non-condensing)\*:
        - 50% relative humidity at 40°C
        - 90% relative humidity at 20°C
      - altitude: ≥ 2000 m (for hydronic kit see chapter 4.4 of the installation manual)

- indoor installation\*
  - presence of water: class AD2\* (possibility of water droplets)
  - presence of hard solids, class AE2\* (no significant dust present)
  - presence of corrosive and polluting substances, class AF1 (negligible)
  - vibration and shock, class AG2, AH2
  - competence of personnel, class BA4\* (trained personnel - IEC 60364)
2. Power supply frequency variation: ± 2 Hz.
  3. The neutral (N) conductor must not be connected directly to the unit (if necessary use a transformer).
  4. Over-current protection of the power supply conductors is not provided with the unit.
  5. The factory-installed disconnect switch(es)/circuit breaker(s) is (are) of a type suitable for power interruption in accordance with EN 60947.
  6. The units are designed for simplified connection on TN(s) networks (IEC 60364). For IT networks provide a local earth and consult competent local organisations to complete the electrical installation.
  7. Derived currents: If protection by monitoring of derived currents is necessary to ensure the safety of the installation, the control of the cut-out value must take the presence of leak currents into consideration that result from the use of optional frequency converters in the unit. A value of at least 150 mA is recommended to control differential protection devices.

**NOTE: If particular aspects of an actual installation do not conform to the conditions described above, or if there are other conditions which should be considered, always contact your local Carrier representative.**

\* The protection level of the control boxes required to conform to this class is IP21B (according to reference document IEC 60529). All 30RW and 30RWA units with correctly installed casing panels fulfil this protection condition.

# Part load performances

With the rapid increase in energy costs and the care about environmental impacts of electricity production, the power consumption of air conditioning equipment has become an important topic. The energy efficiency of a liquid chiller at full load is rarely representative of the actual performance of the units, as on average a chiller works less than 5% of the time at full load.

The heat load of a building depends on many factors, such as the outside air temperature, the exposure to the sun and the building occupancy.

Consequently it is preferable to use the average energy efficiency, calculated at several operating points that are representative for the unit utilisation.

## ESEER (in accordance with EUROVENT)

The ESEER (European seasonal energy efficiency ratio) permits evaluation of the average energy efficiency at part load, based on four operating conditions defined by Eurovent. The ESEER is the average value of energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

## ESEER (European seasonal energy efficiency ratio)

Load %	Air temperature °C	Energy efficiency	Operating time %
100	35	EER1	3
75	30	EER2	33
50	25	EER3	41
25	20	EER4	23

ESEER = EER1 x 3% + EER2 x 33% + EER3 x 41% + EER4 x 23%

## Part load performances

30RW		110	120	135	150	160	185	210	245	275	300
ESEER	kW/kW	4.79	4.56	4.74	4.66	5.36	5.06	5.17	5.01	5.27	5.15

ESEER Calculations according to standard performances (in accordance with EN14511-3:2011) and certified by Eurovent.

# Operating limits

## Operating limits 30RW/RWA

30RW/30RWA	At start-up		At shut-down
Evaporator	Minimum, °C	Maximum, °C	Maximum, °C
Entering water temperature	7.5	30	50

### During operation

	Minimum, °C	Maximum, °C	Maximum, °C
Leaving water temperature	5 (note 1)	15	50

## 30RW - with hydronic module and variable-speed pump

	At start-up and during operation	During operation
Condenser	Minimum	Maximum
Entering water temperature	-15	47 (note 3)
Leaving water temperature	-	52

### Drycooler

Entering air temperature	-20	(note 4)
--------------------------	-----	----------

## 30RW - without hydronic module

	At start-up and during operation	During operation
Condenser	Minimum	Maximum
Entering water temperature	20 (note 2)	47 (note 3)
Leaving water temperature	25	52

### Drycooler

Entering air temperature	(note 5)	(note 4)
--------------------------	----------	----------

## 30RWA - with variable-speed fan

	At start-up and during operation	
Air-cooled condenser	Minimum	Maximum
Entering air temperature	-10	(note 6)

## 30RWA - with fixed-speed fan

	At start-up and during operation	
Air-cooled condenser	Minimum	Maximum
Entering air temperature	0	(note 6)

### Notes:

- 30RW/30RWA units can operate from 4°C to 0°C without modification. In all cases the units must be configured for low leaving-water temperature, and use of antifreeze is required.
- 30RW units without hydronic module operating below 20°C entering condenser water temperature require the use of a three-way valve controlled from the 0-10 V analogue output of the PRO-DIALOG control.
- For a flow rate corresponding to a condenser  $\Delta t$  of 5 K.
- The maximum entering air temperature is based on the drycooler selection.
- The minimum entering air temperature range is between 15 and 20°C (without the use of three-way valves)  
Operation at -15°C ambient temperature is possible with the use of a three-way valve to maintain the required minimum condensing temperature (see note 2).
- The maximum entering air temperature is based on the remote condenser selection.

**IMPORTANT:** Maximum ambient temperatures. For storage and transport of 30RW units the minimum and maximum temperatures must not go beyond -20°C and 50°C. It is recommended that these temperatures are used for transport by container.

## Evaporator water flow rate

	Minimum flow rate, l/s	Maximum flow rate*, l/s		Maximum flow rate**, l/s

210	5.7	12.7	14.6
245	6.5	14.5	16.8
275	7.3	16.6	19
300	8	18.2	20.5

\* The minimum flow rate given is for units without hydronic module that have a fixed condenser flow rate.  
Units with a hydronic module have a variable flow rate and no minimum fixed flow rate. The minimum flow rate is optimised by unit control in parallel with the drycooler fan stages for all operating conditions, especially at low outdoor temperature and low load conditions.

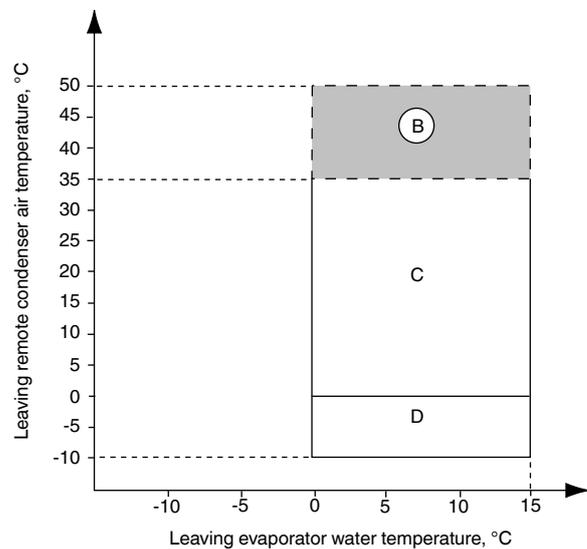

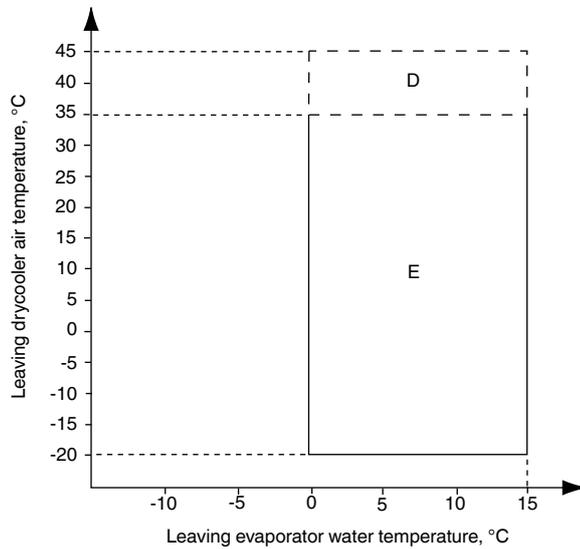

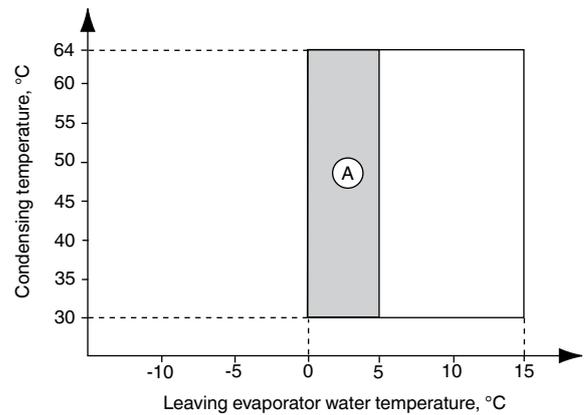

\*\* The maximum flow rate given is for units without hydronic module that have a fixed condenser flow rate.  
Units with a hydronic module have a variable flow rate. The maximum flow rate is optimised by unit control at all operating conditions, based on pump capacity, system pressure losses and outdoor temperature.

# Operating range

## 30RW

## 30RWA

### Notes 30RW

1. Evaporator and condenser  $\Delta T = 5$  K
  2. For 30RW units without hydronic module with an entering condenser water temperature below 20°C a three-way valve is required to allow operation, while maintaining the correct condensing temperature.
  3. For 30RW units equipped with a hydronic module the minimum entering water temperature is -15°C.
  4. Maximum leaving condenser water temperature is 52°C (at full load)
- A Standard unit with without antifreeze solution  
 B Standard unit operation with the anti-freeze solution required and control configuration for a leaving water temperature down to 0°C.  
 C Standard unit operation with the anti-freeze solution required and control configuration for a leaving water temperature down to -10°C.  
 D Operation at high air temperature is based on the drycooler selected.  
 E Operation at low air temperature is possible down to -20°C with a drycooler.

### Notes 30RWA

1. Evaporator  $\Delta T = 5$  K
  2. Unit operation is limited by the maximum compressor condensing temperature of 64°C.
- A Standard unit operation with the anti-freeze solution required and special control configuration.  
 B Operation at high air temperature is based on the condenser selected.  
 C Operating range down to 0°C, if the air-cooled condenser is not equipped with a variable-speed head fan.  
 D Extended operating range with variable-speed fan.

# Water loop volume

## Evaporator

### Minimum volume

A minimum water volume is required for correct chiller operation. The minimum water loop volume can be calculated in accordance with the following formula:

Volume = CAP(kW) x N\* = litres, where CAP is the cooling capacity at nominal operating conditions.

Air conditioning application	N*
30RWA 020-045	3.5
30RWA 060-300	2.5
30RW 110-300	2.5

### Industrial process cooling

Certain industrial process applications may require high stability of the leaving water temperature levels. In this case the values above must be increased.

### Maximum volume

Units with hydronic module incorporate an expansion tank sized for the maximum water loop volume.

The table below gives the maximum water loop volume (in litres) for pure water or ethylene glycol with various concentrations.

30RW/30RWA	30RWA			30RW/RWA		
	020-045	060-080	090	110-150	160-210	245-300
Pure water	673	1000	1000	2080	2900	4162
10% ethylene glycol	487	730	1525	1525	2135	3053
20% ethylene glycol	358	540	1120	1120	1570	2236
35% ethylene glycol	290	430	910	910	1260	1800

## Condenser

### Minimum volume

The condenser water loop volume has no impact on the chiller operation.

**Note:** For heat pump operation (unit control based on the hot-water temperature) the minimum condenser water loop volume must be calculated in accordance with the method used for the evaporator loop, replacing the cooling capacity with the heating capacity.

### Maximum volume

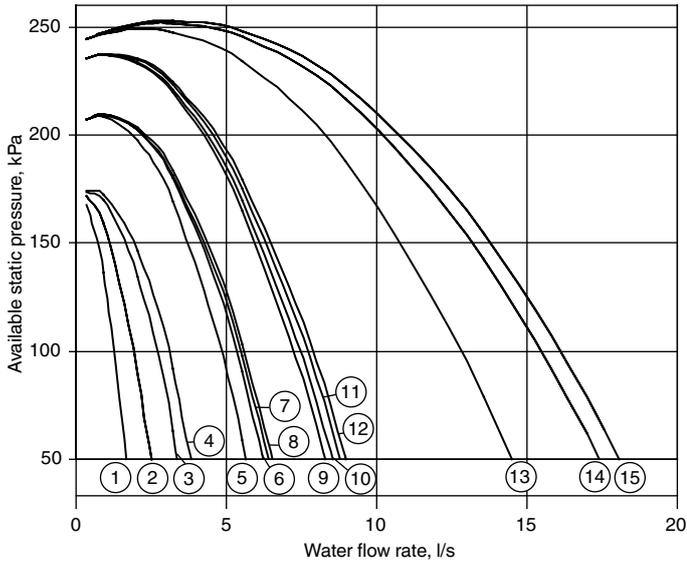

Units with hydronic module incorporate an expansion tank sized for the maximum water loop volume.

The table below gives the maximum water loop volume (in litres) for pure water or ethylene glycol with various concentrations.

30RW	110-150	160-210	245-300
Pure water	2080	2900	4162
10% ethylene glycol	1525	2135	3053
20% ethylene glycol	1120	1570	2236
35% ethylene glycol	910	1260	1800

### Legend

<b>LWT</b>	Leaving water temperature, °C
<b>Qc</b>	Cooling capacity, kW
<b>EER</b>	Energy efficiency ratio, kW/kW
<b>q</b>	Evaporator water flow rate, l/s
<b>Δp</b>	Evaporator pressure drop, kPa

### Application data

Standard units, refrigerant: R-407C  
 Evaporator and condenser entering/leaving water temperature difference: 5 K  
 Evaporator and condenser fluid: chilled water  
 Fouling factor:  $0.18 \times 10^{-4}$  (m<sup>2</sup> K)/W

Gross performances, not in accordance with EN14511-3:2011. These performances do not take into account the correction for the proportional heating capacity and power input generated by the water pump to overcome the internal pressure drop in the heat exchanger.

### Legend

LWT Leaving water temperature, °C  
 Qc Cooling capacity, kW  
 EER Energy efficiency ratio, kW/kW  
 q Evaporator water flow rate, l/s  
 Δp Evaporator pressure drop, kPa

### Application data

Standard units, refrigerant: R-407C  
 Evaporator entering/leaving water temperature difference: 5 K  
 Evaporator fluid: chilled water  
 Fouling factor: 0.18 x 10<sup>-4</sup> (m<sup>2</sup> K)/W

Gross performances, not in accordance with EN14511-3:2011. These performances do not take into account the correction for the proportional heating capacity and power input generated by the water pump to overcome the internal pressure drop in the heat exchanger.

# Guide specifications

Liquid chillers  
Nominal cooling capacity range: 20 to 315 kW  
Carrier model:  
30RW water-cooled  
30RWA condenserless

## Part 1 - General

### System description

- Water-cooled (30RW) or condenserless (30RWA) liquid chiller for indoor installation, equipped with scroll compressors, auto-adaptive microprocessor control and operating with HFC-407C refrigerant that has no effect on the ozone layer.

### Quality assurance

- 30RW units comply with requirements of European directives:
  - machinery directive 98/37/CE, modified,
  - low voltage directive 73/23/EEC, modified,
  - electromagnetic compatibility directive 89/336/EEC, modified and with the applicable recommendations of European standards:
  - machine safety, electrical equipment in machines, general regulations: EN 60204-1,
  - radiated electromagnetic emissions: EN 50081-1,
  - conducted electromagnetic emissions: EN 50081-2,
  - electromagnetic immunity EN 50082-2. 30RW and 30RWA units have been designed and tested in a facility with a quality assurance system certified ISO 9001.
  - 30RW and 30RWA units have been assembled in a facility with an environment management system certified ISO 14001. All units undergo a run test before shipment (electrical test only for 30RWA units).

## Part 2 - Product equipment

### Compressors

- Hermetic scroll compressor with only three moving parts, 2-pole electric motor, cooled by suction gas. Overload protection through an internal thermostat. Polyolester synthetic oil charge, and oil level sight glass.

### Evaporator

- Stainless steel plate heat exchanger with welded copper connections. From size 30RW 160 upwards the evaporator has two interlaced independent refrigerant circuits. Closed-cell thermal foam insulation.

### Condenser (30RW only)

- Stainless steel plate heat exchanger with welded copper connections. From size 30RW 160 upwards the condenser has two interlaced independent refrigerant circuits.

### Refrigerant circuit

- Each circuit includes: one or two compressors, liquid line valve, moisture sight glass, filter drier, thermostatic expansion device, high and low pressure transducers, manually reset high pressure switch, high and low-pressure safety valve (except sizes 30RW 020-045) and HFC-407C refrigerant charge. The main components of the refrigerant circuit are welded.

**Note:** On 30RWA units the refrigerant circuit also includes a check valve on the discharge piping, a solenoid valve on the liquid piping, refrigerant piping and a nitrogen holding charge.

### Control and power circuit control box

- The control box is accessible via a hinged door. It includes a main disconnect switch, fuses and circuit breakers, compressor and evaporator water pump contactors, thermal relays, low-voltage control circuit transformer (24 V control circuit) and the Pro-Dialog control system. The whole unit is supplied via a single power connection point (three-phase supply without neutral).
- Extraction fans protecting the electrical components against overheating.

### Chassis/cabinet

- Chassis and cabinet made of galvanised sheet steel. Painted in oven-baked polyester powder paint in light grey colour (RAL 7035). Removable side and rear panels. Front access via hinged doors.

### Evaporator hydronic module

- Integrated hydronic module, including: removable screen filter, expansion tank, single monocell centrifugal water pump (dual water pump optional from sizes 30RW 110 upwards) - three-phase motor with internal thermal protection, water flow switch, safety valve set to 4 bar, flow control valve, pressure gauge and purge valves. Internal piping made of galvanised steel. Thermal piping and water pump insulation to prevent condensation. Victaulic water connections at the top (30RW 110-150) or on the right-hand side (30RW 160-300) with welded connection sleeve.

**Note:** Units without hydronic module (standard): water flow switch installed as standard and water piping protected against condensation.

### Condenser hydronic module

- Integrated hydronic module, including: removable screen filter, expansion tank, single monocell centrifugal water pump (dual water pump optional from sizes 30RW 110 upwards) - three-phase motor with integrated frequency converter, safety valve set to 4 bar, pressure gauge and purge valves. Internal piping made of galvanised steel with thermal insulation. Victaulic water connections at the top (30RW 110-150) or on the right-hand side (30RW 160-300) with welded connection sleeve.

## Carrier Pro-Dialog Plus control system

Pro-Dialog Plus ensures the following functions:

### Control

- Entering or leaving chilled or hot water (heat pump option) temperature control by PID loop with compressor run time and start-up equalising. The system permanently adjusts the system inertia and ensures complete protection against excessive compressor cycling.
- Head pressure control by auto-adaptive algorithm:
  - Control of the frequency converter, integrated into the condenser water pump
  - Activating a maximum of 8 fan stages with operating time equalising or fan speed control (with Carrier glycol cooler or air-cooled condenser)
  - Fan rotation speed control (with Carrier air-cooled condenser)
- Evaporator and condenser water pump control (optional dual pump with automatic change-over in case of a fault from size 30RW 110 upwards).
- Control at the second setpoint (example: unoccupied room).
- Leaving water temperature reset, based on the air temperature (with Carrier glycol cooler or air-cooled condenser) or the difference between entering/leaving water temperature.

### Safety

- The system checks the evolution of the parameters (temperatures, pressures etc.), and responds to maintain the compressor within the operating range. If despite this one parameter exceeds its limit, an alert message is generated or the unit is shut down. The following faults cause the refrigerant circuit or the unit to be shut down:
  - Low suction pressure
  - High discharge pressure
  - Low suction temperature
  - Compressor, water pump overload
  - Reverse compressor rotation
  - Temperature sensor and pressure transducer fault
  - Board and loss of communication fault
  - Customer safety device tripping
  - Water heat exchanger anti-freeze protection
  - More than 50 alert or fault codes to facilitate fault detection.

### Operator interface

Includes status or fault LEDs, two numerical displays, a refrigerant system synoptic diagram and a command keyboard.

- Immediate display of parameters: entering/leaving chilled water temperature, compressor suction/discharge pressures and temperatures, setpoint, run times and number of compressor start-ups.
- Diagnosis and complete parameter set by selection of one of the following ten menus: information, temperatures, pressures, setpoints, input values, test, configuration, alarms, alarm history and run times.

### Remote chiller management

- Volt-free contact inputs permit:
  - Start/stop control
  - Selection of cooling or heat reclaim mode (override mode at high condensing temperature)
  - Integration of a customer safety device
  - Operation at the second setpoint\* (example: room unoccupied)
  - Maximum demand limit\* (three limit levels from size 30RW 160 upwards)

\* One or the other for 30RWA 110-160

- Outputs are available for:
  - Start-up of a boiler
  - Signalling of a general fault condition for each circuit.

**Note:** For units without hydronic module (standard) a 0-10 V output is available to control a three-way valve or a variable-speed condenser water pump.

- The optional CCN Clock Board permits:
  - Control in master/slave configuration of two chillers operating in parallel
  - Programming of operating time schedules (up to 8 periods per week)
  - Programming of operating time schedules for the second setpoint (up to 8 periods per week)
  - Definition of an operating time period with a reduced number of fans (for example during the night)
  - Definition of an operating time period with demand limitation
  - Integration of the chiller into a building monitoring system (BMS): serial port RS 485.

Order No. 13430-20, **10.2012**. Supersedes: 13430-20, **03.2009**.
